

Built for Dental. Not Just File Sharing.

Many clinics send and records (CBCT scans, photos, STL files, videos, labs, etc.) via file-sharing services like WeTransfer or WhatsApp. While it works, it wasn't built for dental and you risk triggering regulatory investigations and costly fines.

Here's why secure dental file-sharing infrastructure changes everything.

WeTransfer/WhatsApp Aren't HIPAA Compliant

Histora is built to meet both GDPR and HIPAA standards, ensuring dental data is shared securely, compliantly, and with full patient privacy protection.

CBCT Files With Nowhere To Open Them

Histora includes a built-in DICOM viewer, allowing dentists and specialists to view CBCT and other imaging files directly in the platform.

Files Without Context Are Just Files

When files are shared without patient history or clinical context, dentists lose time piecing together information before they can diagnose or plan treatment.

Capability	Histora	WeTransfer	WhatsApp
Legal, Compliance & Security			
HIPAA & GDPR Compliant	✓ Compliant by design	✗ Only GDPR Compliant	✗ Not designed for PHI
Audit Trail	✓ Full log: who, what, when	✗ No record access	✗ No record access
Access Control	✓ Role-based, patient-authorized	✗ Anyone with the link	✗ Anyone with the link
Usability			
DICOM & STL Viewer	✓ Native in-browser viewer	✗ Download required	✗ Download required
Patient-Linked Records	✓ Every file is tied to a patient	✗ No context	✗ No context
Full Patient History	✓ Complete longitudinal record	✗ One file/folder at a time	✗ One file/folder at a time
Designed for Dentistry	✓ Purpose-built for dental	✗ Generic file transfer	✗ Generic file transfer

Protect Your Patients. Protect Your Clinic.
